

TBR4100/1025

Free Radical Analyzer

- Real-time detection with electrochemical microsensors
- Includes one temperature sensor, choice of two additional sensors (one for **TBR1025**) and a start-up kit.
- Wide dynamic range for detection
- Wide bandwidth for recording fast events
- Measure:
 - Nitric oxide from $< 0.3\text{nM}$ – $100\mu\text{M}$
 - Hydrogen peroxide $< 10\text{nM}$ – 100mM
 - Hydrogen sulfide
 - Glucose
 - Oxygen from 0.1–100%
- Isolated architecture allows simultaneous measurement of free radical and independent analog data (ECG, BP, etc.) data on any channel
- Benchtop or rack mounted

Free radical analyzers are available in two models:

- **TBR4100** is the four-channel model
- **TBR1025** is the one-channel model

The operation of the analyzers and specifications are exactly the same. Real-time detection and measurement of a variety of redox-reactive species is fast and easy using the electrochemical (amperometric) detection principle employed in the **TBR4100/1025**. These optically isolated free radical analyzers have ultra low noise. TBR4100 channels operate independently.

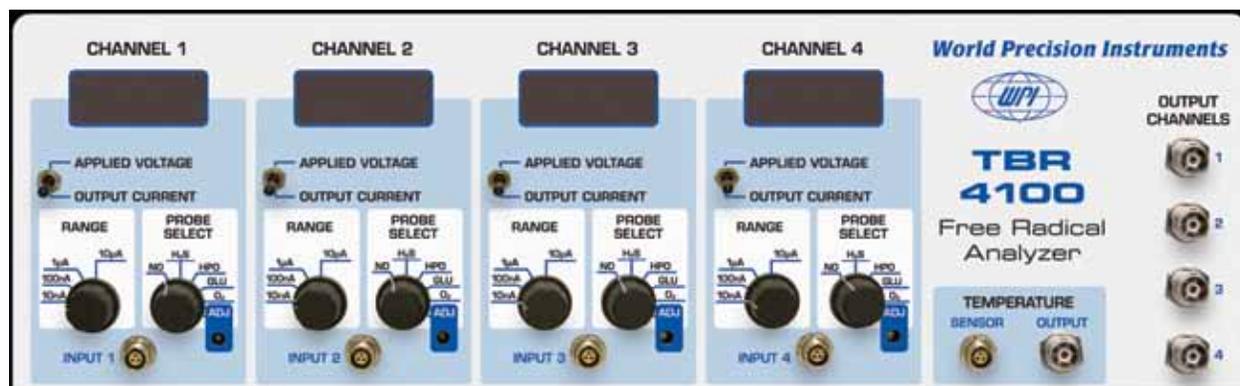

The **TBR4100/1025** is designed for use with WPI's wide range of nitric oxide, hydrogen peroxide, hydrogen sulfide and oxygen sensors. the **TBR4100** can measure four different species simultaneously in the same preparation.

Simply plug a sensor into any one of the input channels on the front panel and select the detection and acquisition parameters using the software. Poise voltage can be selected from a range of values tuned for optimal response from WPI sensors. An independent input port for real-time monitoring of temperature is also included.

The **TBR4100/1025** analyzer utilizes PC-based data acquisition via a Lab-Trax interface; data traces are displayed and recorded in real-time. Data can be viewed making adjustments to smoothing and filter settings without affecting the original stored raw data. In addition, the Lab-Trax T series data interface can also be used to simultaneously record other physiological data (ECG, HR, BP, etc.) to the same data record.
